

Collaborative Learning via Multi-Touch Interactivity for Healthcare

3FX designs interactive multi-touch experiences and content – in the form of tables &/or walls, for clients within the healthcare marketplace. Our multi-touch platforms encompass application design & development, hardware integration, and dynamic scientific visualization & animation of medical information and processes.

Multi-touch surfaces create intuitive user interfaces, allowing viewers to interact and connect with the intended message - within a "socially collaborative" environment.

ideum Presenter Multi-Touch Wall Display

The Presenter is a massive 65" LED LCD full HD display with an integrated i7 computer for amazing graphic performance.

The integrated touch sensor supports 32+ simultaneous touch points and performs flawlessly in nearly any lighting situation.

The Presenter can be mounted either horizontally or vertically.

The 2" thin Presenter is protected by hardened tempered glass, a vandal-proff lightweight aluminum shell and locked access to input and output ports

Interactive content can be virtually anything- i.e. MOA/MOD animation, device & delivery systems, product branding, KOL video, still imagery, .pdf data, charts & graphs, text, ISI, etc.
